

Cloud Digital Leader

Introduction to your learning journey

Welcome! Whether you're new to the field of cloud computing or you're expanding your skill set, the courses in the Cloud Digital Leader learning path will help you build a solid foundation in cloud technology, data, and AI/ML. You'll explore how Google Cloud drives digital transformation, equipping you to contribute effectively to your organization. In addition to these practical skills, this path is specifically designed to prepare you for the **Cloud Digital Leader certification**.

There are **six courses** in the learning path.

True digital transformation requires more than just technical capacity—it requires leadership.

In this video, **Vint Cerf**, Google's Chief Internet Evangelist, explains why successful cloud adoption is less about knowing *how* the technology works and more about understanding *what* it can do.

Vint Cerf: Some people imagine that the technical capacity to understand the use of the cloud is all you need in order to transform a business. And I think this would be a big mistake.

Hello, my name is Vint Cerf. I'm Vice President and Chief Internet Evangelist at Google. My primary job is to make sure there is more Internet out there for everyone. But my big interest is making sure the cloud is useful as well.

I think if you're concerned about being ready for cloud, you need to understand what its capabilities are, what it can deliver. You don't necessarily have to understand in great detail how it does it, but you have to appreciate what it can do and how much flexibility it offers in terms of new products and services, or transforming ways in which all businesses operate.

Without that insight, without that understanding, it's very hard to steer yourself into an advantageous place in the cloud world.

If you think a little bit about the scale of the cloud, you'll appreciate that most companies—and certainly most individuals—would not be capable of investing in and maintaining the computing capacity and data storage capacity of today's clouds. That transformation means that companies have access to facilities they otherwise could not get access to.

Failure to at least attend to new technology could be a fatal risk. And that's why we think everyone should be at least aware of what the new technologies are and whether or not they fit into the corporate structure.

Let's talk a little bit about leadership. I think most leaders don't need to know in detail how the Internet works, but they have to have a kind of fundamental appreciation for what it means to get access to cloud-based technology through the Internet.

Think of the Internet and the cloud as an enabling infrastructure that can be purposed in infinite different ways.

So it's important that the leaders at least have a conceptual grasp of what these technologies can do for their companies, their products, and services. This is not just about technology. It's about how technology is used. And that requires real vision.

Course format

Throughout this six-course learning path, you'll engage with a diverse range of content. To support your learning, the material features text, video, audio, interactive exercises, and quizzes.

To receive course credit, you must complete and pass the graded quizzes.

Cloud Corner

One recurring feature you'll encounter in this course is an audio element we call "Cloud Corner." Cloud Corner is a fictional podcast featuring Googlers **Katelyn** and **Joe**. They'll guide you through the Cloud Digital Leader learning path, appearing periodically across all six courses to discuss key topics. Listen in for an introduction.

Transcript

Katelyn: Welcome everyone to the Cloud Corner! I'm Katelyn, coming to you from the Google office in New York.

Joe: And I'm Joe, joining you from the Google office in Cambridge, Massachusetts!

Katelyn: We're going to be your hosts as you go through the Cloud Digital Leader learning path, popping in like this to help connect the dots.

Joe: And we know there's a lot of excitement out there about cloud technology and digital transformation. You really can't go a day without hearing those terms.

Katelyn: It's so true. But we also know that with all that excitement, you might also have many unanswered questions. You might be sitting there thinking ...

Joe: "What is cloud technology, really?" or "What does 'digital transformation' actually mean for me?"

Katelyn: Exactly! Or even, "How does this all help my organization?" and the big one: "Where do I even begin?"

Joe: Well, if you've asked yourself any of those questions, we've got good news: you are in precisely the right place.

Katelyn: At Google Cloud, we want to provide you with the necessary information and the tools you need for success as you begin your journey to the cloud and digital transformation.

Joe: And the Cloud Digital Leader series of courses is designed to be that perfect first step.

Katelyn: Let's get into it!
